

SAFETY SHOULD NEVER BE AN AFTERTHOUGHT

WHY USE THE RESOURCE?

The advantage of using The Resource to perform your certifications, whether new or recertification, is multi-fold. We bring the certification course to your facility and use your equipment to ensure that those in the program have a first hand knowledge of the environment in which they will be working. Our program is fully customizable; no matter your need, we can work with you to find the right solution.

PROGRAM OVERVIEW

Our IVO Program is broken down into two sections: a four-hour classroom portion followed by a hands-on assessment where candidates are observed operating actual equipment.

DOCUMENTED PROCESS

Program instructors complete a thorough IVO Evaluation Checklist for each candidate based on their observed abilities to be placed in their employee file.

DETAILED MATERIALS

Each candidate receives a workbook during classroom training which covers examples of general operating procedures, safety guidelines, maintenance, refueling and charging of forklifts.

SAFETY FIRST

Whether we are working with new candidates or those going through recertification we ensure each individual knows the importance of safe operating practices.

THE RESOURCE

THE RESOURCE

WHAT WE OFFER

According to OSHA Regulations, all heavy industrial equipment operators must be certified by an OSHA approved evaluation method. That's where we come in. The Resource has completed the National Safety and Health Certification program to properly train employees to be forklift operators. This, combined with our 30 plus years of experience in manufacturing and distribution environments, has allowed us to create an extremely comprehensive program that can be tailored to meet your needs. Our certified instructors lead participants through an engaging, interactive classroom training course which prepares them to pass both written and operational evaluations.
